

Advanced Usage

For viewing layers, use Acrobat Reader 6.0 or above. It is assumed you already know how to have Acrobat read the file because there are a number of ways to do that. Follow these instructions to Deselect/Select layers:

1. Open the map Pioneer_Landowner_Map in Acrobat Reader
2. Select each in turn: VIEW -> SHOW/HIDE -> NAVIGATION PAINS -> LAYERS. This will open up a Layers panel on the left side of the window.
3. Under the Layers title is an icon that if you hover your mouse pointer on for a few seconds will say "options" click on that Icon and choose "Expand All"
4. On the left of the Layers panel are little eye icons. Click on these to toggle the visibility of the various layers.

Acrobat useful viewing tool:

1. Open the map and adjust the whole window to fill the left half of your computer screen.
2. Select the whole page zoom (VIEW -> ZOOM -> ZOOM TO PAGE LEVEL)
3. Select the Loupe tool (VIEW -> ZOOM -> LOUPE TOOL)
4. Nothing happens till you click the mouse on the left map. A new window will pop up. Adjust the new window to fill the other half of your computer screen.
5. In the bottom right of that new window is a box Icon that will allow you to adjust the colour of the box outline on the left map. Suggested is Yellow.
6. Dragging the box on the left map will show the magnified image on the right. A slider on the left half allows changing magnification.

The Acrobat FIND command is useful.
